1 equity is likely to grow at a healthy rate. (T-7, p. 9; T-13,
2 p. 25.) The Commission also notes that the return on equity
3 granted in this proceeding does not expressly include an increment
4 for Beluga or other project financing, and, for that reason as
5 well, it would be inappropriate to continue an associated con-
6 dition in the form of a restriction on dividends.

7 (c) Double Leverage

8 The Commission has previously articulated its policies
9 with respect to when a hypothetical, instead of actual, capital
10 structure should be used for ratemaking and what approaches are
11 appropriate for this purpose. Specifically, the Commission has
12 endorsed the use of a hypothetical capital structure under the
13 following circumstances. First, if a utility's actual capitali-
14 zation is determined to be inefficient and unreasonable, thereby
15 producing an inflated rate of return, it may be appropriate to
16 substitute a hypothetical capital structure. Second, if the level
17 of debt capitalization subjects the utility to excessive risks,
18 including possible impairment of capital, it also may be neces-
19 sary to utilize an objective capital structure. Third, if a
20 utility is part of a holding company system in which the utility's
21 book capitalization and capital costs are not a true reflection of
22 the system's capital costs with respect to the utility, its
23 capitalization should be adjusted accordingly.

24 The common approaches to adjusting actual capitalization
25 under the third circumstance are (1) to substitute the parent's
26 capital structure for that of the subsidiary or (2) to restate the
27 equity investment in the subsidiary in terms of the debt and
28 equity capital of the parent, the so-called double leverage
29 adjustment. (U-78-4(33), pp. 179-184; U-81-41(14)/U-83-40(1),
30 p. 11.)

31 When a utility is a member of a larger corporate family,
32 its capital structure will be determined in part, if not totally,

1 by its parent. In particular, in a regulated environment there is
2 a compelling financial incentive for the parent to maximize the
3 percentage of equity in the utility's capital structure. This
4 strategy permits the parent to leverage its investment in the
5 subsidiary inasmuch as the utility can be expected to receive a
6 return on equity which is greater than the cost of the debt
7 financing used to create some portion of that equity. In ad-
8 dition, the dollars which can reasonably be returned to the parent
9 in the form of dividends are also increased. In any event,
10 through the capital budgeting process and its own internal in-
11 vestment strategy, the parent generally is the final arbiter of
12 the utility's capital structure.

13 ENSTAR is part of a larger corporate entity and, thus,
14 may be subject to the aforementioned financial machinations
15 observed generally in holding company situations. While the
16 question of whether a double leverage adjustment was appropriate
17 for ENSTAR surfaced during the hearing, it has not been examined
18 in sufficient detail to permit the Commission to definitively
19 decide the issue. Accordingly, the Commission will place ENSTAR
20 on notice that this question will be considered in its next rate
21 case. By deferring the subject until that time, the Commission
22 will have the benefit of considering ENSTAR's actual operating
23 experience under Seagull ownership, without dividend or capitali-
24 zation constraints, as a factor in its deliberations. In the
25 interim, the equity ratio used in developing rates in this pro-
26 ceeding is both conservative and developed without input from
27 Seagull.

28 Rate Case Expense

29 The Staff and ENSTAR have agreed to the inclusion of
30 \$115,000 for rate case expense in the calendar year 1984 test
31 year. This represents an additional \$6,164 above the amount
32 requested by ENSTAR in its filing. Staff disallowed all rate case
