

EKLUTNA TRANSITION PLAN EXTENSION AGREEMENT

REVISED EXHIBIT B

(Effective _____, 2016)

With the addition of the new Eklutna Generation Station (EGS) between Plant 2 and the Eklutna Hydroelectric Power Plant, the existing wheeling formulas for the Eklutna wheeling project need to be revised. While a large part of the project remains unchanged, some formulas are modified to account for the presence of EGS.

New Wheeling Formulas

AMLP

$$ML\&P = Eklutna\ South_{OUT} - Bkr\ 167/168_{OUT} + ML\&P\ Contract\ Path\ Purchases - ML\&P_{NPE}$$

CEA

$$CEA = BKR167/168_{OUT} + CEA\ Contract\ Path\ Purchases - CEA_{SCH}$$

MEA

$$MEA = ML\&P_{Local} + Reed + Palmer + Dow + MEA\ Contract\ Path\ Purchases - MEA_{SCH}$$

$Eklutna\ South_{OUT}$ = Metered flow from Plant 2 Switchyard to Anchorage Substation

$Bkr\ 167/168_{OUT}$ = Metered flow from Anchorage Substation to CEA University Substation

$ML\&P\ Contract\ Path\ Purchases$ = ML&P purchased power using Eklutna Project Lines as a contract path

$CEA\ Contract\ Path\ Purchases$ = CEA purchased power using Eklutna Project Lines as a contract path

$ML\&P_{Local}$ = Metered flow on MEA Substations on the ML&P local Eklutna Project Line between Briggs & EGS

$Reed$ = Metered flow on MEA Reed Substation

$Palmer$ = Metered flow on MEA Palmer Substation

Dow = Metered flow on MEA Dow Substation

$MEA\ Contract\ Path\ Purchases$ = MEA purchased power using Eklutna Project Lines as a contract path

CEA_{SCH} = CEA Scheduled Project Energy from Eklutna Hydro Power Plant

MEA_{SCH} = MEA Scheduled Project Energy from Eklutna Hydro Power Plant

$ML\&P_{NPE}$ = Eklutna Net Project Energy –Line loss – AWWU Energy –MTA Cell Site - CEA_{SCH} - MEA_{SCH}

$Eklutna\ Net\ Project\ Energy$ = $BKR462_{OUT} - BKR462_{IN} + BKR362_{OUT} - BKR362_{IN} + AWWU\ Gen + Twin\ Peaks$

Using the above wheeling calculation formulas, each Project owner will be billed quarterly for their line usage. The Project will receive the owners' wheeling payment as revenue. The wheeling revenue will be allocated to the owners, based on ownership shares, after all quarterly wheeling bills have been paid.

This is an example how to calculate the wheeling charges using the fourth quarter of 2015 data.

	Month Total (MWh)			Multiplier	(kWh)			Total(kWh)
	OCT	NOV	DEC		OCT	NOV	DEC
